# Verslag Datavisualisatie Groep 7

---- Jasper Ameye, Jonas Sys & Viktor Van Nieuwenhuize -----

# 1. Taakverdeling

### Jonas:

- Configuratie van observable framework
- Scraper voor dataset
- Maken github actions voor publicatie & automatisch uitvoeren van de scraper
- Plots op "Complexity" pagina
- Plot "Time between releases" op de "Set Data" pagina
- Nalezen van alle tekst en toevoegen van wat er in de community speelt

## Jasper:

- Snelheid verbeteren van de notebook d.m.v. dataloaders
- Data exploratie plots (kaart layout, mana cost, power, toughness, power/toughness difference, set sizes, set sizes by release date) -> niet behouden in eindresultaat
- Plots "Card Attributes By Color" & "Card Color Distribution" op de "Influence of color" pagina
- "Set Type Distribution" op de "Set Data" pagina

### Viktor:

- Layout & Schrijven van de home page
- Plots op de "Card Data" en op de "Power, Toughness, Mana Cost and Color" pagina
- Plot "Number of Cards per Color per Card Type" op de "Influence of color" pagina
- Plot "Evolution of Set Type Distribution" op de "Set Data" pagina

## ledereen:

- Tekst bij zijn eigen plots
- Brainstorming

# 2. Logboek

## Initiële plots om de dataset te verkennen:

Kleuren nog niet goed gekozen, geen assenlabels, gewoon probeersels

### MTG card report

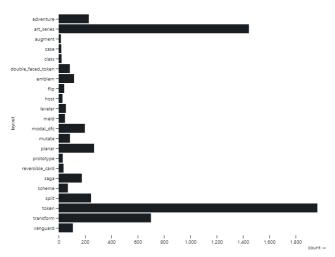

### **Card Layout**

Cards can have different kinds of layout. This is a simple grouping of the layouts.

x: number of cards with the same layout

y: layout of the card

The following graph excludes the 70569 cards with a normal layout.

Source data:

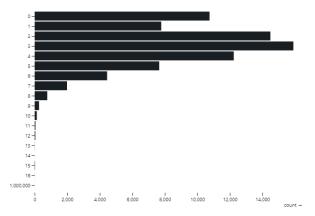

▶ Object {total: 76566, normal: 70569, token: 1965, adventure: 229, split: 246, transform: 701, mutate: 86, art\_series: 1445, prototype: 31, modal\_dfc

### **Card Mana Cost**

Mana cost of a card.

x: number of cards

y: mana cost of card

Source data:

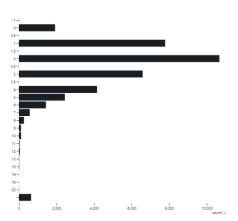

▶ Object {0: 10745, 1: 7778, 2: 14485, 3: 15898, 4: 12235, 5: 7654, 6: 4451, 7: 1987, 8: 774, 9: 268, 10: 131, 11: 49, 12: 42, 13: 6, 14: 1, 15: 20, 1

#### **Card Power**

Power value of a card.

x: number of cards

y: power value

Source data:

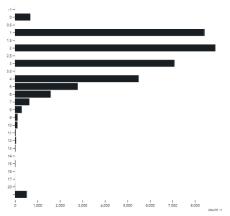

▶ Object {0: 1923, 1: 7762, 2: 10661, 3: 6584, 4: 4156, 5: 2442, 6: 1437, 7: 574, 8: 265, 9: 109, 10: 112, 11: 28, 12: 43, 13: 13, 15: 14, 16: 2, 18:

### Card Toughness

Toughness value of a card.

x: number of cards

y: toughness value

Source data:

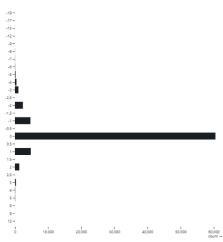

▶ Object {0: 680, 1: 8393, 2: 8901, 3: 7088, 4: 5498, 5: 2790, 6: 1588, 7: 636, 8: 301, 9: 116, 10: 110, 11: 31, 12: 46, 13: 21, 14: 1, 15: 16, 16: 2,

### Card Power/Toughness Difference

Difference between power and toughness value of a card.

x: number of cards

y: difference calculated as follows: Power - Toughness

Source data:

▶ Object {0: 60512, 1: 4769, 2: 1314, 3: 268, 4: 74, 5: 67, 6: 11, 8: 3, 12: 2, total: 76566, -1: 4651, -3: 1044, -2: 2398, -5: 167, -4: 450, NaN: 689

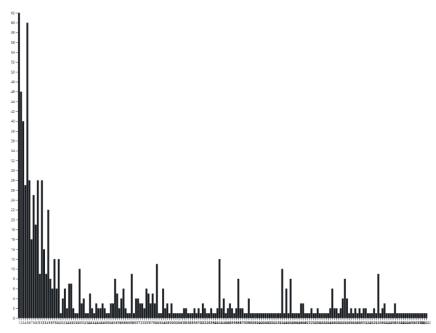

#### **Card Set Sizes**

Distribution of sets by their size (= number of cards in set).

eize of se

y: number of sets with size x

You can hover over bars to get exact values.

Source data

Deject {total: 76566, tsp: 286, zen: 234, c17: 299, tmm2: 14, xln: 274, jud: 143, 3ed: 296, kld: 264, rav: 291, mic: 149, mh2: 311, vow: 283, rtr: 2

#### Set sizes by release date

Number of cards in a set. Sets are ordered by release date.

x: release date

y: size of set

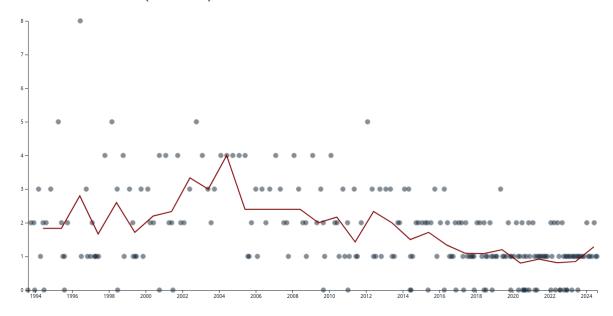

You can hover over points to get name, release date and size of the set.

Source data:

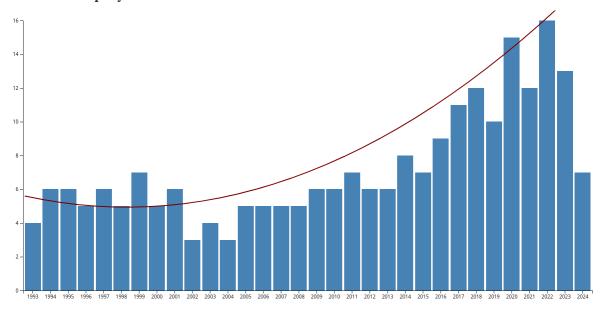

Diplect (tsp: Object, zen: Object, c17: Object, tmm2: Object, xln: Object, jud: Object, 3ed: Object, kld: Object, rav: Object, mic: Object, mh2: Object, object, rav: Object, mic: Object, mh2: Object, rav: Object, mic: Object, mh2: Object,

Previous page Example report Next page Small Test Report

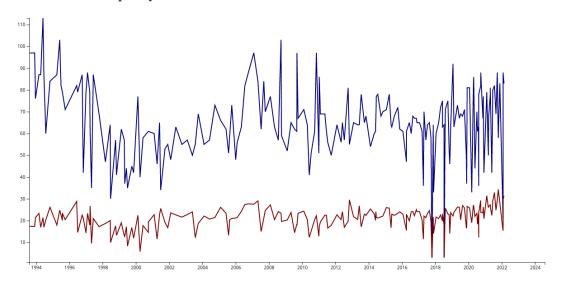

### Time between releases (in months)

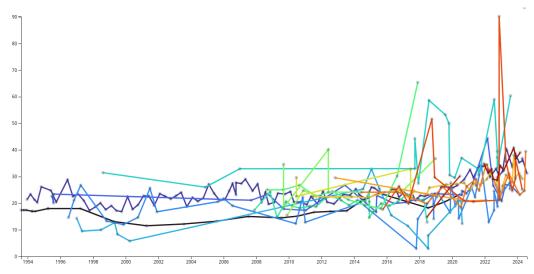

## Number of sets per year

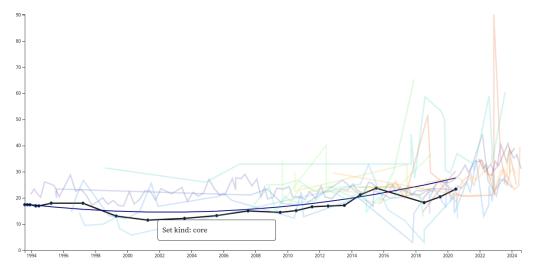

## **Evolution of set complexity**

### Evolution of set complexity by set kind

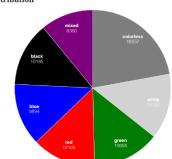

### Evolution of set complexity by set kind

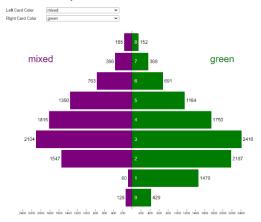

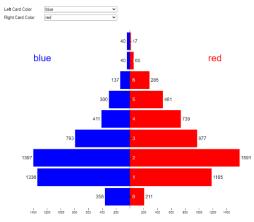

### MTG card report Card Color Distribution

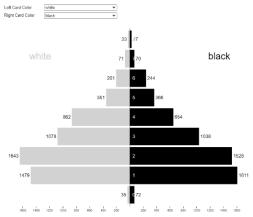

#### Card Mana Cost By Color

### Card Power By Color

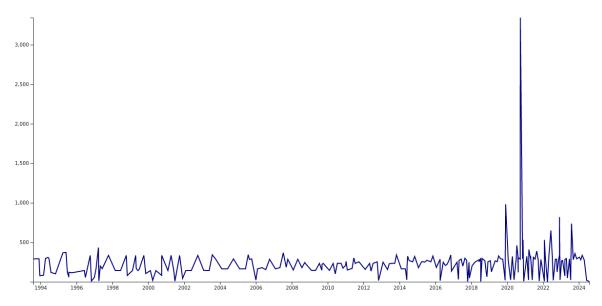

### Card Toughness By Color

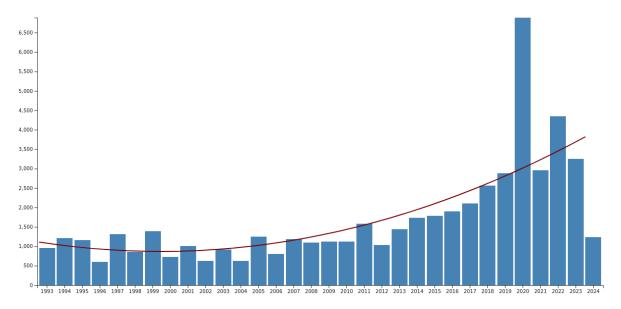

Previous page Next page
Example report Small Test Report

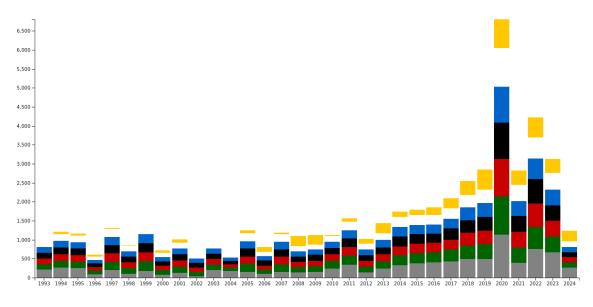

### **Evolution of set size**

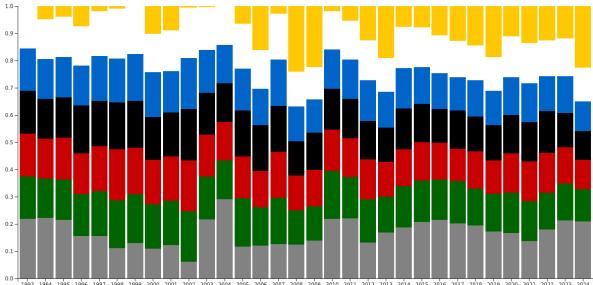

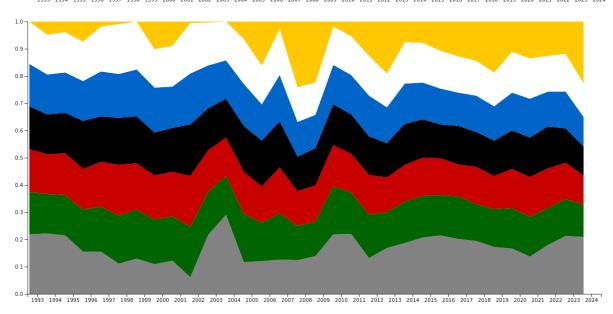

### Number of cards released per year

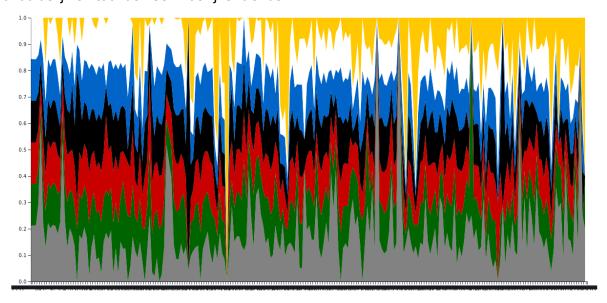

### **Evolution of color distribution**

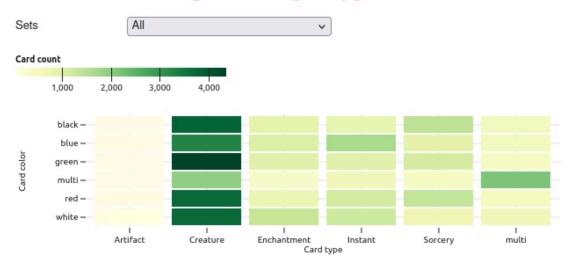

Bovenstaande plots ook eens geprobeerd met idpv per jaar per set, dit was veel te onduidelijk en toonde veel moeilijker trends

## Nieuwe complexere plots met meer polish

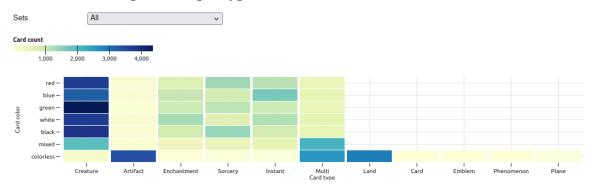

Na de exploratiefase hebben we plots die complexer zijn en met betere kleuren gemaakt. Ook assenlabels worden nu gebruikt.

# Number of cards per color per type

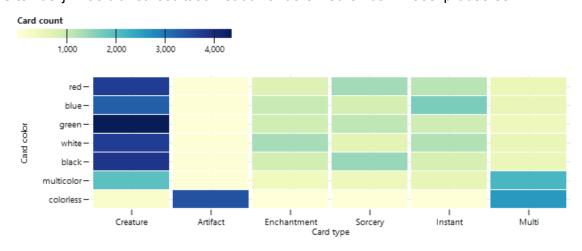

Card types die door triviale redenen enkel colorless zijn werden weggelaten

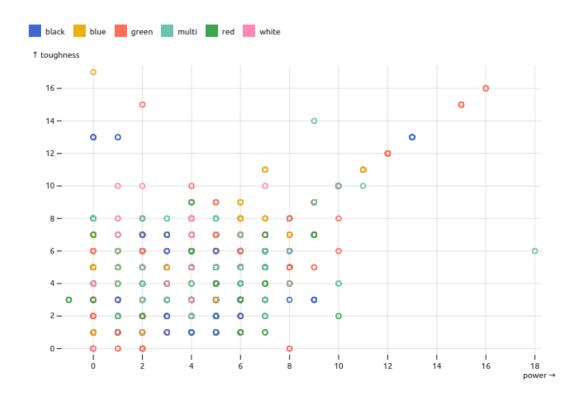

### Number of cards per color per type

Uiteindelijk was dit het resultaat met ook andere kleuren dan initieel probeersel

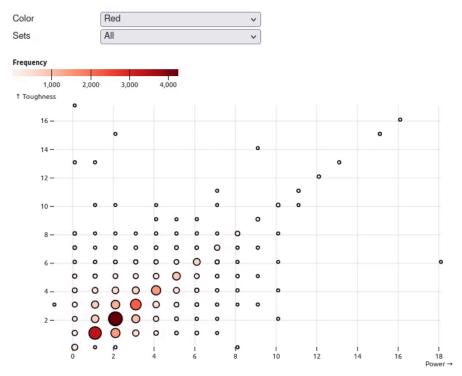

Initieel probeersel, alle kleuren over elkaar is te messy

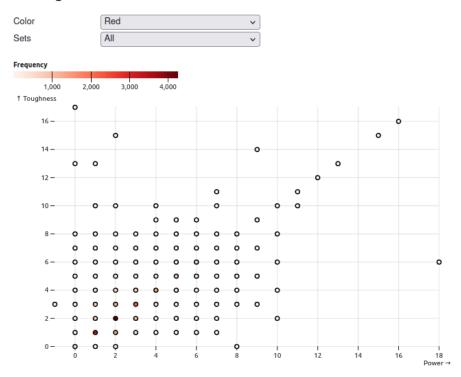

Beter per kleur, hoeveelheid kaarten nu dubbel gecodeerd via grootte en kleur

## Card power vs color

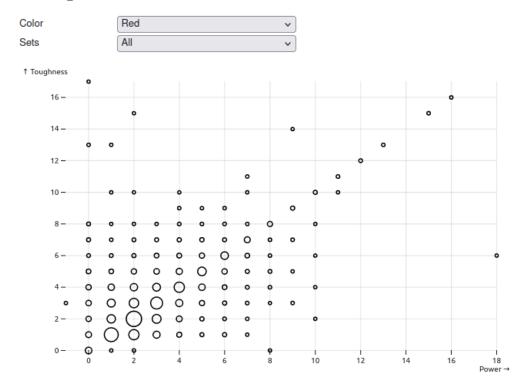

In bovenstaand plot enkel kleur of enkel grootte gebruiken om de hoeveelheid kaarten aan te duiden is minder duidelijk vinden we, zoals te zien in onderstaande plots

## Card power vs color

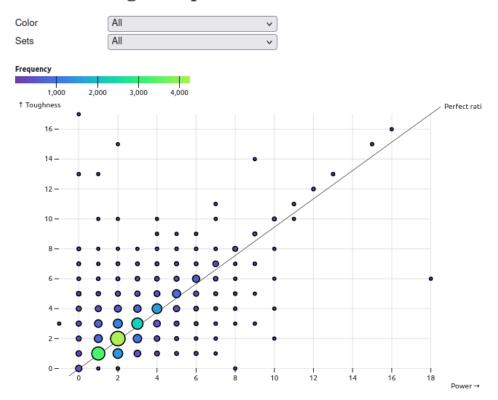

## Card power vs color

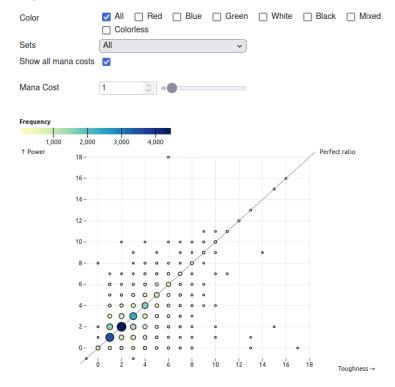

Er werd ook een optie voor alle sets toegevoegd. Kleurenschaal was moeilijker, geen kleurenschalen van licht naar donker meer over. Uiteindelijk werd deze schaal nog veranderd naar iets lichters (zie onderste plot)

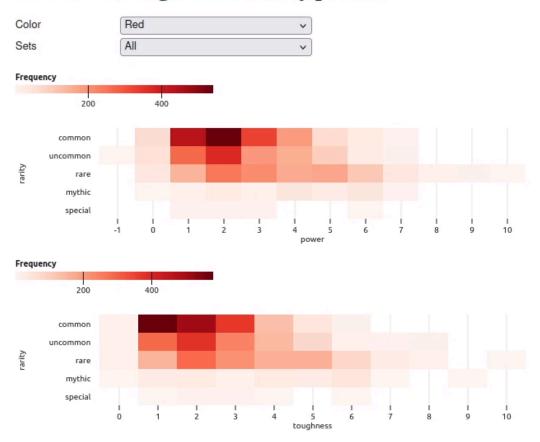

## Power vs Toughness per color

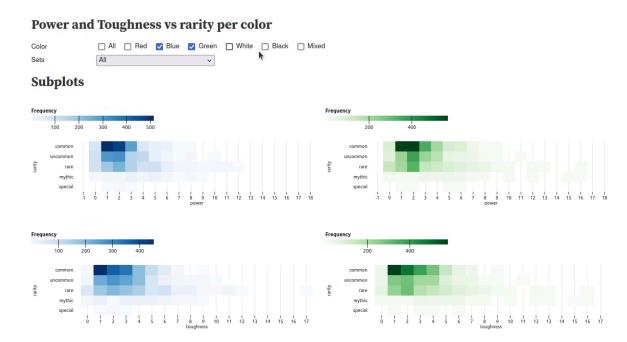

Ook werd hier een slider toegevoegd voor mana cost en deze kan met een selector aan of uit gezet worden

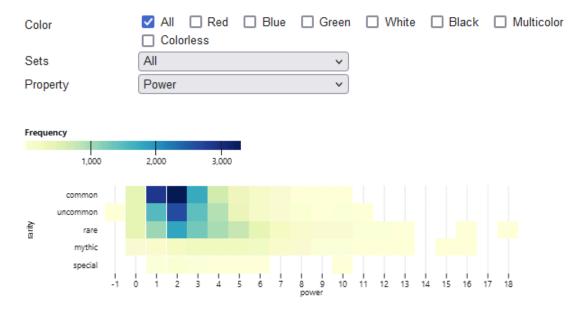

# Power and Toughness vs rarity per color

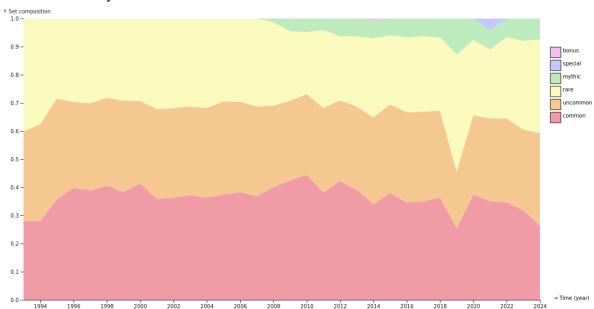

Nieuw idee, idpv selecteren uit lijst voor de kleuren, selectievakjes, zo kunnen meerdere kleuren geselecteerd worden

## De verschillende properties werden nu ook samengevoegd met een selector

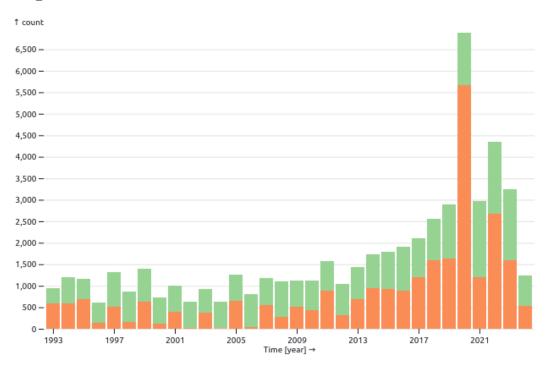

### Evolutie van rarity

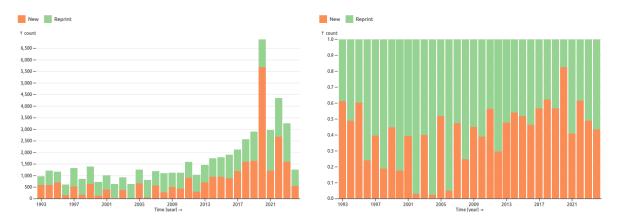

Nieuwe, betere representatie van het aantal kaarten gereleased per jaar dat ook het reprints vs nieuwe kaarten toont

# **Reprints vs New Cards**

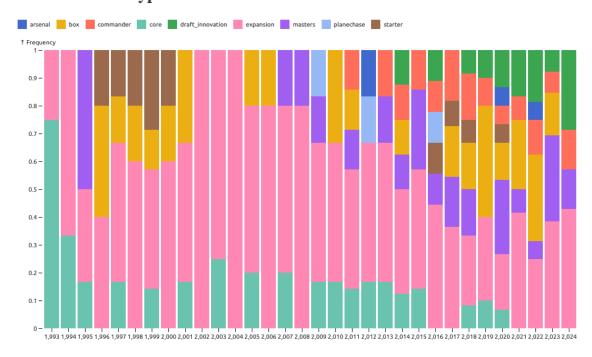

### **Reprints vs New Cards**

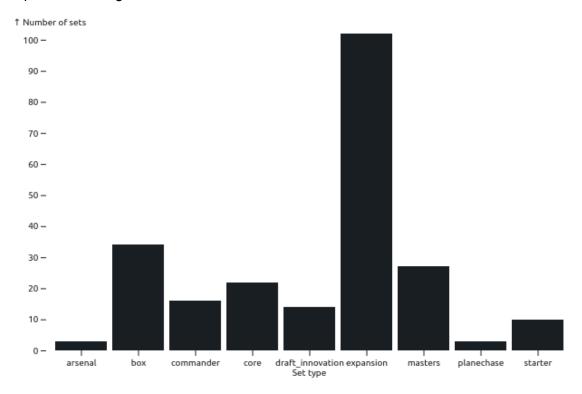

Er werd gekozen om zowel normalised en absoluut te tonen

## Distributie set types, initieel messy door slechte kleurenschaal

## **Evolution of set type**

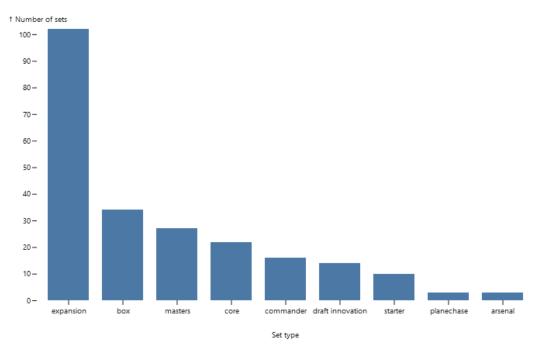

### Bar plot werd ook gemaakt voor overal distribution

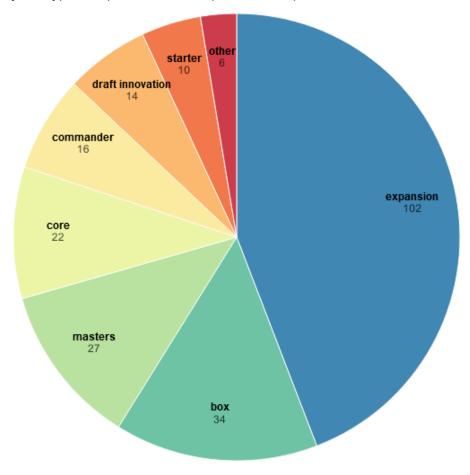

Vervolgens werd gerangschikt op grootte en de kleur werd aangepast:

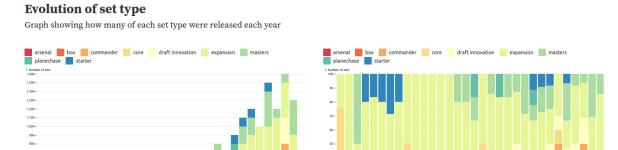

# Set type distribution

Maar een pie chart bleek een betere representatie aangezien het ook is hoeveel van alle sets zijn dit type, i.e. part of a whole, perfect voor pie charts

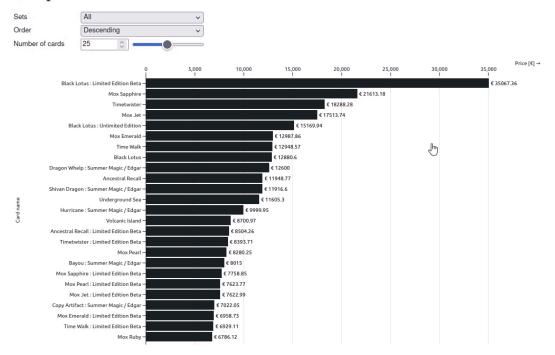

Voor de stacked bar chart werd er uiteindelijk voor de spectral kleurenmap gekozen en net zoals de reprints vs new cards werd er ook gekozen om dit zowel absoluut as r

Kaarten kunnen zeer duur zijn, dit plot werd ook gemaakt om de prijzen te tonen

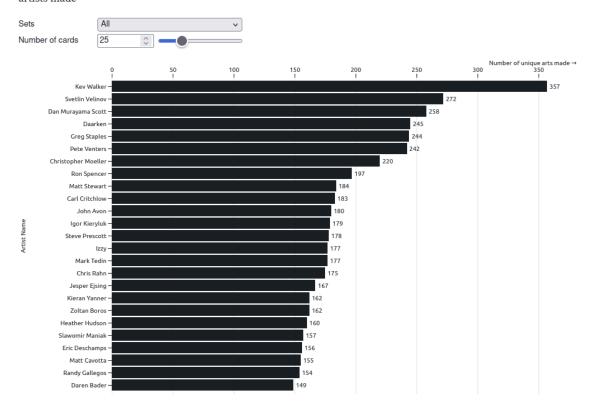

### **Card prices**

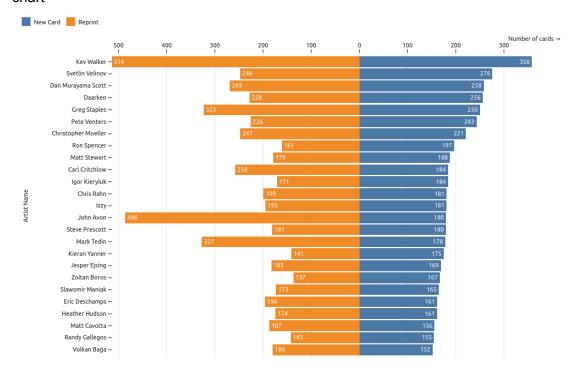

## Een gelijkaardig plot werd gemaakt dat de kaarten die elke artist maakte toont

### Most noteable artists

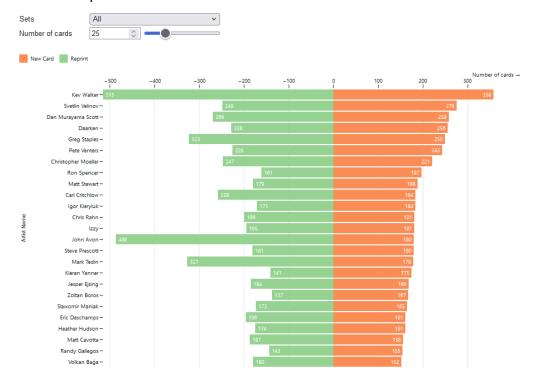

Bar graph showing the number of unique arts (i.e. reprints not counted) that the top artists made

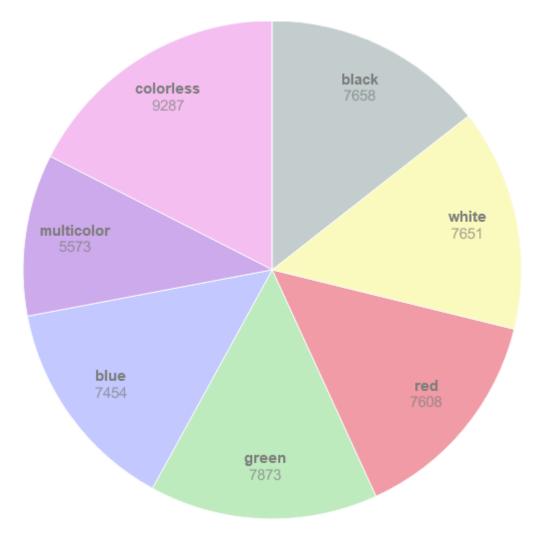

We beslisten uiteindelijk om dit te splitsen in nieuwe vs reprints met een back to back bar chart

Finaal werden de kleuren nog aangepast om dezelfde te zijn als de andere plot over nieuwe kaarten vs reprints

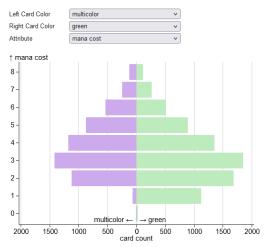

### Kleuren voor de color distribution plot werden aangepast

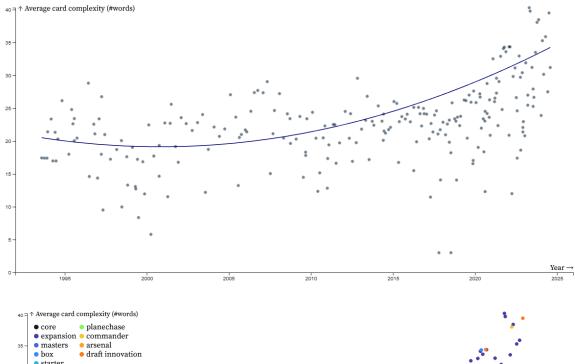

## Idem voor de back to back bar chart om kleuren te vergelijken De 3 attributes werden ook samengevoegd met een selector

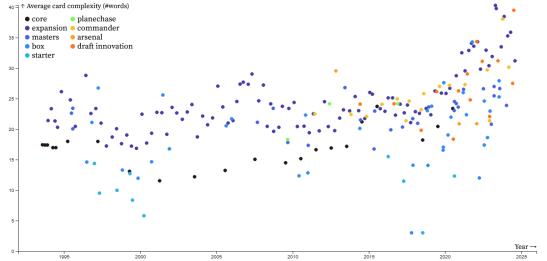

### **Card Attributes By Color**

Different colors focus on different strategies and cards of the same color often have a lot of synergy together. Some colors are more focused on defense, represented by higher average toughness while other colors might be more powerful. In the plot below, you can select two color categories to compare. Next you can select in which category you want to compare the colors. You can look at the difference in toughness, power or mana cost.

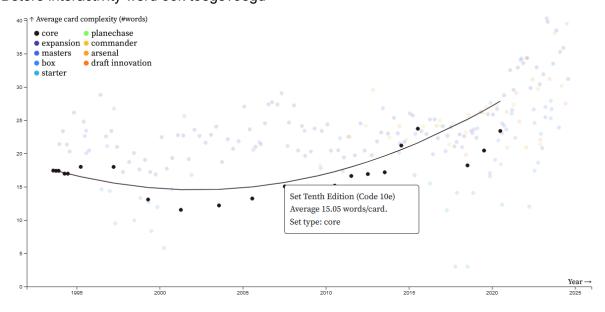

## De complexity plots werden ook cleaner gemaakt met betere kleuren

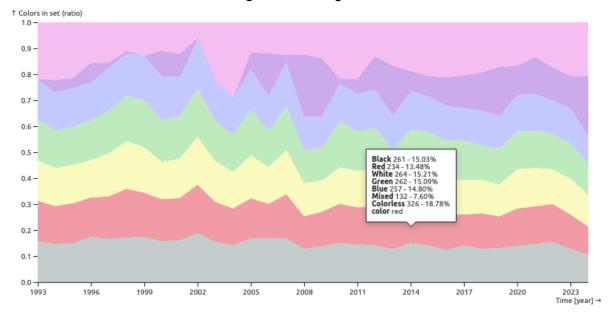

## Betere interactivity werd ook toegevoegd

# D3 -> Observable plot

Sommige plots werden initieel met D3 gedaan, maar uiteindelijk beslisten we om zoveel mogelijk observable plot te gebruiken

De color stacked area chart werd omgezet en kreeg nieuwe kleuren

Hetzelfde werd gedaan voor het plot over de rarities
